PROFESSIONAL SUMMARY

Full Stack Developer with a strong frontend focus using React, Next.js, and TypeScript. Co-founder and developer responsible for the technical development of MiTaller360, a SaaS product deployed to production and currently undergoing early-stage development and validation. I work end-to-end across user interfaces, data modeling, API integration, authentication, deployments, and QA. My strongest area is frontend development, supported by hands-on experience with NestJS, Prisma, and PostgreSQL gained through building the product.

TECHNICAL SKILLS

Frontend (primary)	HTML5, CSS3, JavaScript ES6+, TypeScript, React, Next.js App Router, Tailwind CSS v4, responsive design, accessibility, and semantic HTML.
Backend & APIs	Hands-on experience with Node.js, NestJS, REST APIs, validation, authentication, role-based authorization, and error handling.
Data	Hands-on experience with PostgreSQL, Prisma ORM, and SQL; use of Supabase, Firebase/Firestore, data relationships, queries, and migrations.
Tools	Git, GitHub, branches and Pull Requests, Docker, Vercel, Render, Netlify, Postman, pnpm, VS Code, and Chrome DevTools.

DEVELOPMENT EXPERIENCE

MiTaller360 - Co-founder / Full Stack Developer

Next.js, TypeScript, Tailwind CSS, NestJS, Prisma, PostgreSQL, Docker, Vercel, and Render | 2026 - Present

- Build and maintain a production-deployed SaaS currently in early validation, centralizing six operational areas: customers, vehicles, work orders, scheduling, receipts, and workshop administration.
- Own the product's end-to-end technical development, including the frontend, API, data model, authentication, permissions, deployments, and functional QA.
- Designed a monorepo architecture with two independent applications - a Next.js frontend and a NestJS API - connected to PostgreSQL through Prisma.
- Implemented role-based permissions, operational audit trails, and a digital workflow for generating, viewing, and emailing non-fiscal receipts linked to each work order.
- Deployed the frontend, API, and database to Vercel and Render, configuring a custom domain and secure communication between services.

Estudio Jurídico Lachat - Frontend Developer / Freelance Production Project

Next.js, TypeScript, Tailwind CSS, Supabase, Resend, and Vercel | 2026

- Developed and launched a responsive professional website for a real law firm, using a custom domain and production deployment on Vercel.
- Automated a four-stage lead capture workflow: validation, file uploads, persistence in Supabase, and email notifications through Resend.
- Centralized prospective-client inquiries and attachments in a database, preventing critical information from depending on scattered messages.
- Implemented metadata, Open Graph, semantic structure, and resources focused on the firm's local search visibility.

DEVELOPMENT EXPERIENCE - CONTINUED

OpsCore - Frontend Developer | Collaborative Product Simulation, No Country

Next.js, React, JavaScript, Tailwind CSS, Django REST, Vercel, and Render | 2026

- Implemented interfaces and differentiated permissions for four roles: operator, supervisor, technician, and manager.
- Built a four-stage workflow to report, assign, resolve, and analyze operational incidents within a single application.
- Integrated the frontend with a real Django REST API, including authentication, protected routes, filters, alerts, forms, and dashboards.
- Resolved authentication and mobile navigation issues during deployment while working with branches, Pull Requests, and functional QA.

OTHER PROJECTS

Rescue Store - Frontend Developer / E-commerce

React, JavaScript, Firebase, React Router, and Netlify | 2023

- Developed a functional e-commerce application with a product catalog, authentication, protected routes, shopping cart, product detail pages, and global state management.
- Integrated Firebase Authentication and Firestore for user management and data persistence, and published a working demo on Netlify.

rescue-store.netlify.app | github.com/Lucas-Epherra/rescue-store

DEVELOPMENT PRACTICES

- Validate changes through type checking, production builds, manual functional QA, and responsive testing before release.
- Deliver small, verifiable changes through branches and Pull Requests, keeping the backend as the source of truth for business rules and permissions.
- Build modular and reusable components, favoring Server Components and limiting client-side interactivity to leaf components.

ADDITIONAL PROFESSIONAL EXPERIENCE

Lifeguard - Argentina and Spain

2019 - Present

- Built more than seven years of experience in prevention and emergency response while working with international teams and the public in two countries.
- Performed in high-responsibility environments through risk assessment, clear communication, operational coordination, and decision-making under pressure.

EDUCATION & LANGUAGES

Coderhouse - Web Development, JavaScript, and React JS | Completed coursework, 2022

Languages: Native Spanish | Professional English for technical reading, conversation, video calls, and work meetings.
